

Team Pomato

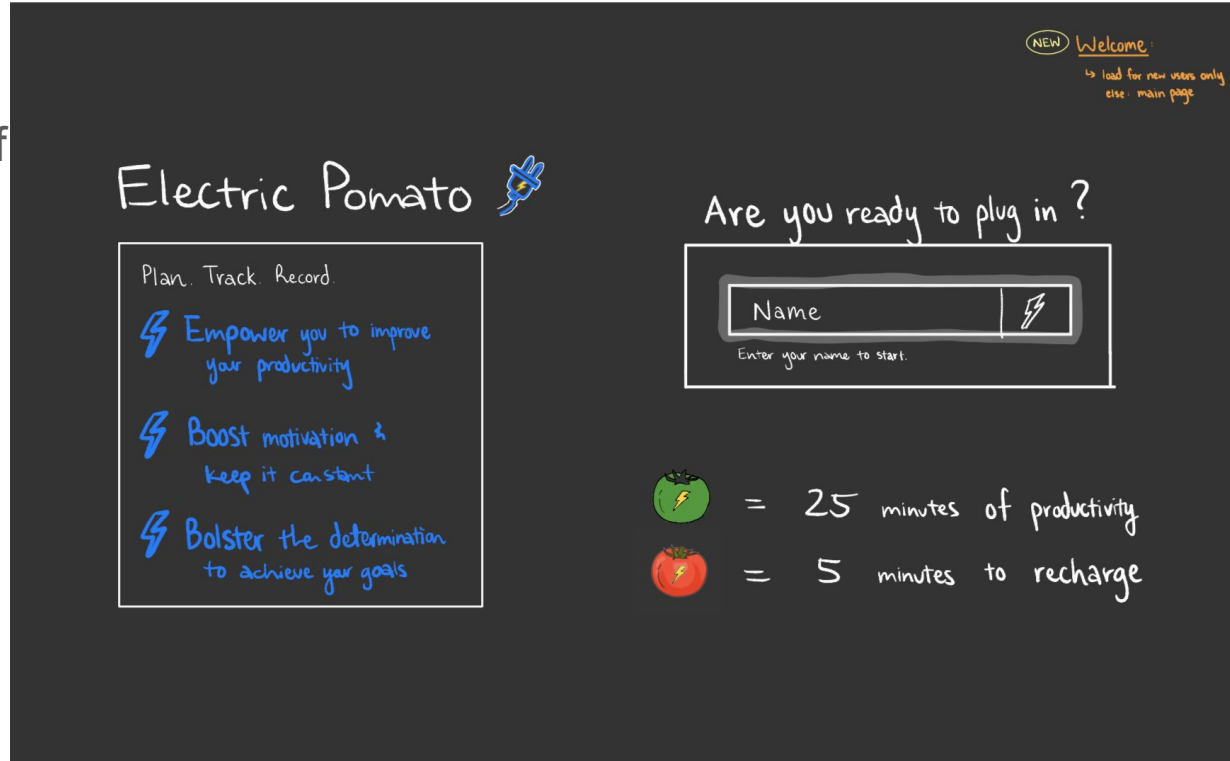

Design Team Meeting Report

Before Showing The Design...

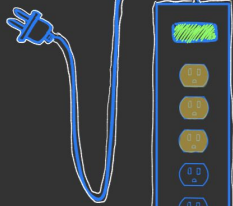

- Before showing the finalized design from our meeting, we wanted to show the differences in the original design, and how we got to where we ended up.

Original Design for Splash Page

- A splash page often comes before the rest of a website, in our case what the user sees first before making their Pomodoro List.

Different Designs Ideas for Planning Stage

TERESA'S DAY

TO DO LIST

January 21, 2021

#	Tasks	Estimate Pomos
1	Complete Biology Homework	2 2
2	Write 1 page summary	2
3	Add a task	

Start My Day

WIP Planning: Start of Day

Notes:

→ ordered descending priority

↳ group

→ Start My Day

↳ before only tasks

↳ after (task 4, 5, 6, 7, 8, 9, 10, 11, 12)

↳ timer (highlight color)

→ timer, white, highlight when new a task

→ Rules for Pomos

↳ pom + 1 → decompose

↳ pom + 1 → group

↳ group

Tasks Completed: 0

Tasks Remaining: 10

25 mins 00secs

Current Task: Task A

Next Up

Task B

Task 2

Task C

Task 3

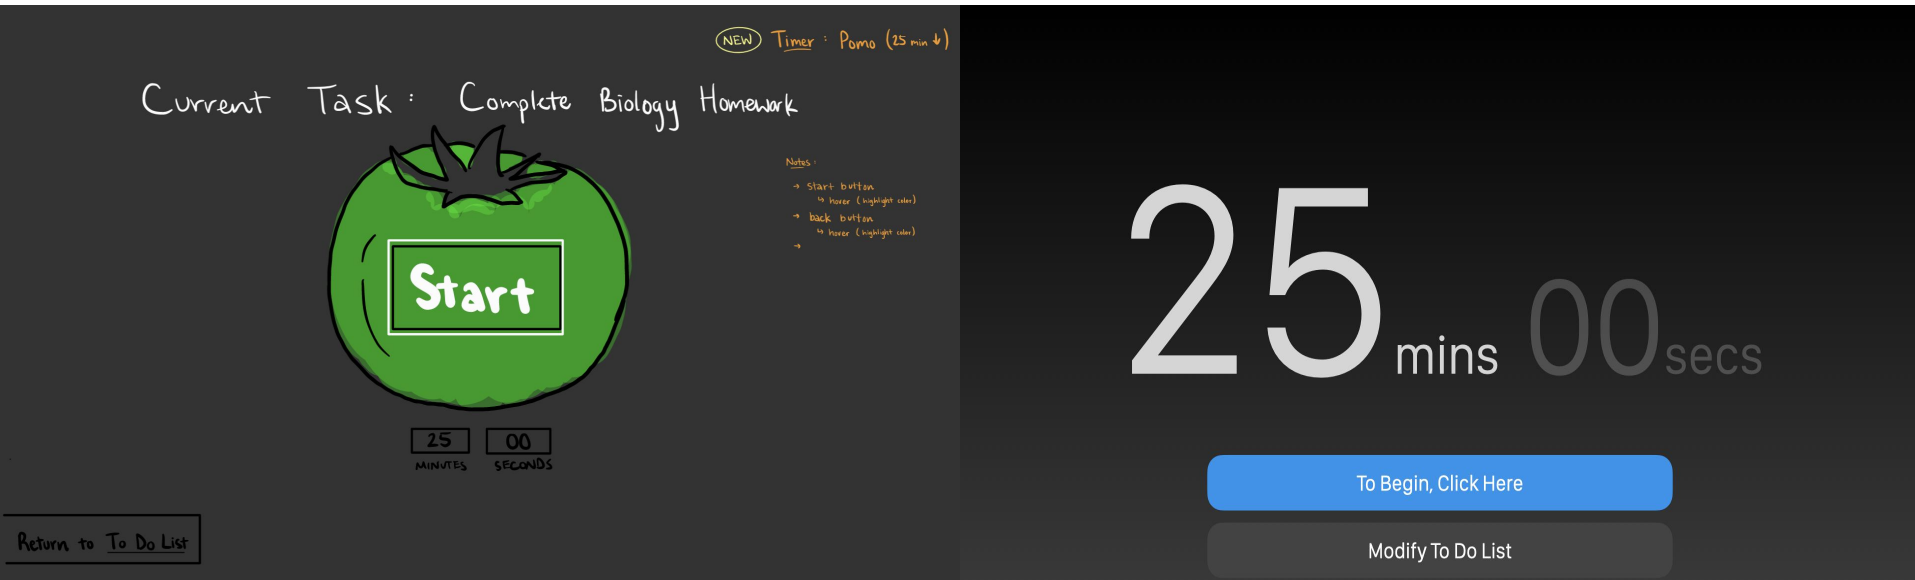

Task D

To Do List

Differences in Timer (Before Starting)

- Theme & Button to the side
- Simple Time & Centered buttons

Difference in Timer (Ongoing Timer)

- We discussed the need for adding a section for Urgent Tasks.

Pom Count: 1

WIP Timer: Pomo (25 min +)

Current Task: Complete Biology Homework

24 49
MINUTES SECONDS

If you finish early, try to be productive.

I got interrupted!

Tasks Completed: 0
Tasks Remaining: 10

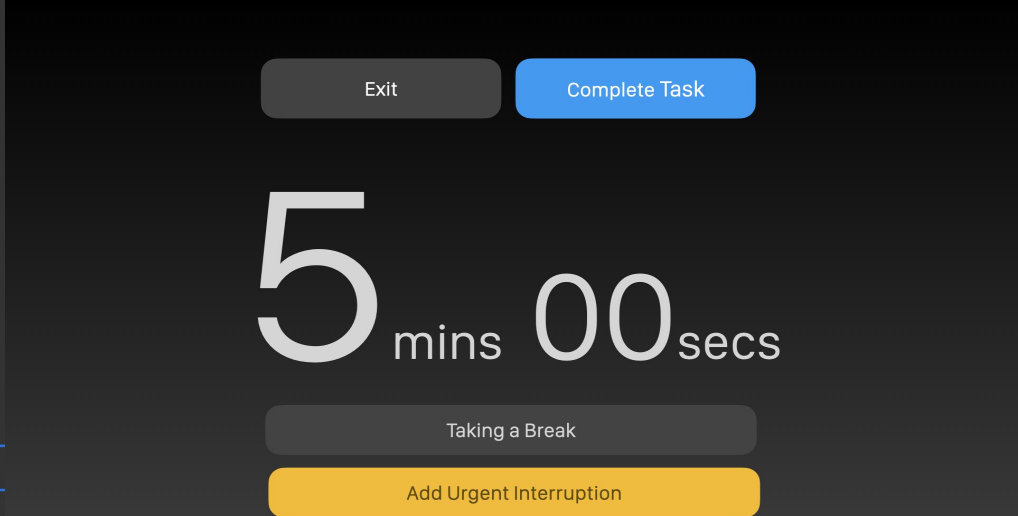

24 mins 59 secs

Current Task: Task A

Add Urgent Interruption

Differences in Break Timer (Unfinished Tasks)

- While taking a 5min break between Pomo's of a single task.
- Button for adding more Pomo's to this task.
- Button to be done with the current task.

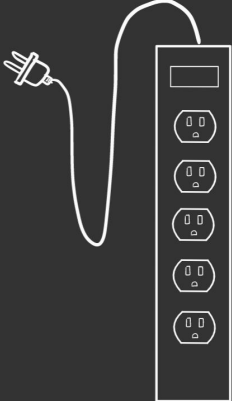

End of Day Log

- At the end of the day (all tasks are done), display all completed tasks.

WIP Recording End of Day

Time to Unplug

Good work today, Name!

RECORDS

The Design Team's Proposed Design

- Below is the Design Team's Proposed Design
- The design takes in features from both original ideas.
- At the end, we'd love to hear Design AND Development comments and concerns.

Splash Page: Documentation and Edit/Add Tasks

Example Documentation/Tips:

- During breaks, clicking the TO-DO list will allow you to add any tasks you may have forgotten
- during tasks, you may not edit TO-DO list, please focus on your task
- during breaks, you may edit your TO-DO list.

Electric Pomato 

Plan. Track. Record.

// Documentation

⚡	25	Pomo
⚡	5	Break

Are you ready to plug in?

NEW Welcome:
↳ load for new users only
else: main page

Name 
Enter your name to start.

// allow user to adjust task order

Index	Task Name	Estimated Pomato
1.	Add a task (+)	

// add task button

scrollable canvas

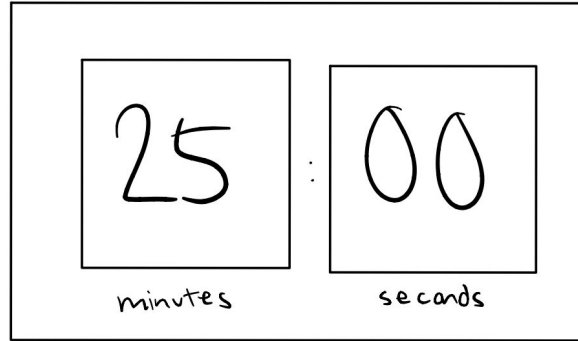

Start My Day // Start button

Timer Design: First timer of the day

The goal is for the page to be simple. Just, the task, and a timer and start button.

Current Task : **TASK NAME**

// Timer ↓

// appears only once
→ very beginning

// pop-up window

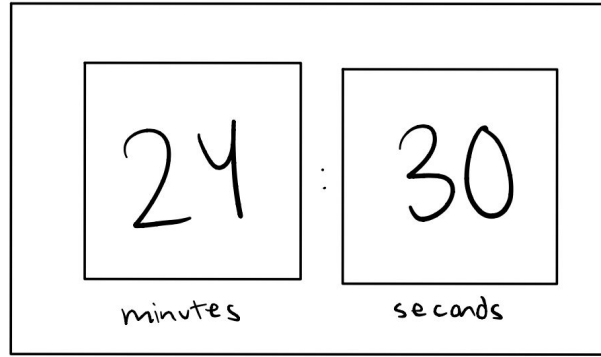

Running Timer Design

Focus on simplicity.

- Idea: Turn this into a loading bar that when the mouse is hovered over the bar you can see how much longer is left

Current Task : TASK NAME

// Timer ↓
running

Break Timer: Ongoing Task, View To-Do List, Two Buttons (Centered)

This is where the most stuff will take place. We settled on only having words change and not having different pages. This makes it easier for dev team. We also made TO-DO list a pop up window for space purposes

Current Task : **TASK NAME**

BREAK

ex) 1/3 pom done

Case: pom > 0

05	:	00
minutes		seconds
I finished early!		Exit

Change exit to say "finished day" or "done with tasks" or something like that.

// I need more time!

// pop-up window

To - Do List

Break Timer: Finished Task (No More Pomo's)

Word changes for "I need more time" in case people didn't finish their task. We then log this change and show how long it took people to complete their tasks.

Next Task: **TASK NAME**

05	:	00
minutes		seconds
I need more time!	Exit	

BREAK

Case: $\frac{3}{3}$ poms
pom = 0 done

if (tasks > 1) {

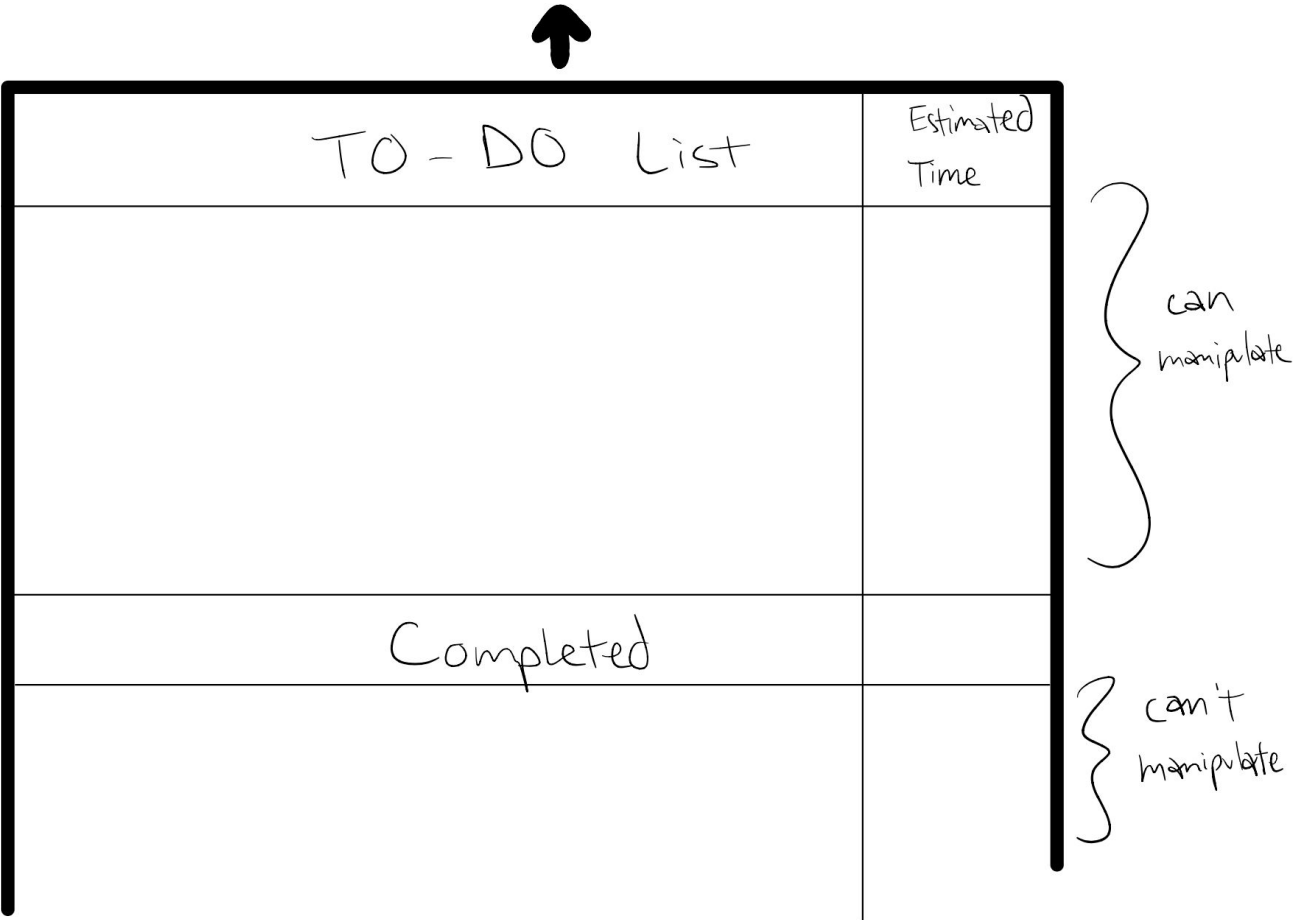

// I need more time!

// pop-up window

To - Do List

To-Do List Viewer: Animates upwards, Lists Upcoming, & Completed Task

If not too complicated, can we have it so the TO-DO list is able to have the order of tasks changed in this screen?

TO-DO List	Estimated Time
Completed	

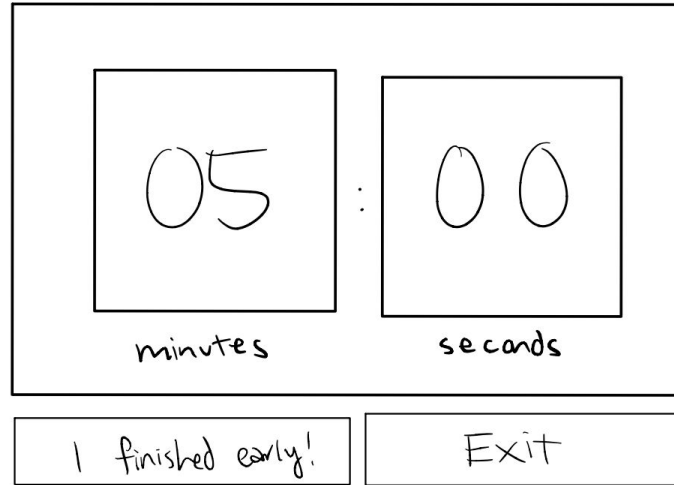

can manipulate

can't manipulate

Break Timer: Final Task (0 Tasks Remain), Prompt to Add More Tasks/End Day

Still working out what the notification will be, but we want to tell the user they're on their last task so they can either add more tasks if they want, or speed up and finish for the day.

FINAL TASK : TASK NAME

BREAK

```
if (tasks == 1) {
```

```
  notify ( This is your final task.
```

```
  // pop up alert
```

```
  This is your final task.  
  Do you want to add a task?
```

```
  // no response => automatically start  
  // final task after  
  // break is over
```

```
  // I need more time!
```

```
  // pop-up window
```

To - Do List

End of Day Log: Lists Completed Tasks, Compared Estimate to Actual Pomos, Graph(s)

Final slide, maybe add an “unfinished tasks” list as well, but we will show them how long they actually took and how long they said they would take for future times they use our website.

Questions for You

1. Color Scheme? (Let's decide this together c:)
 - a. At least three colors (at most 5)
 - b. <https://visme.co/blog/website-color-schemes/>
2. Dev Team, does anything seem impractical, or too challenging?
3. Front End Team, does anything seem impractical, or too challenging?
4. General thoughts, comments, concerns?
